Docket No.: PHUS017043US (PII 3341)

## Amendments to the Abstract

Please replace the Abstract of the disclosure with the following rewritten Abstract:

A fluoroscopic imaging apparatus is provided. The apparatus includes an x-ray source for projecting x-rays through a subject. The x-ray source has a voltage and a current associated therewith. The apparatus also includes an x-ray detector for detecting radiation which has passed through the subject and a monitor for displaying an image indicative of the detected radiation. The image defines a field of view. In addition, the fluoroscopic imaging apparatus includes an operator interface for selecting a region of interest within the field of view. In response to image data within the region of interest, an image of the region of interest can thereafter be enhanced, and enhancement means for enhancing, in response to image data within the region of interest, a subsequent image of the region of interest.
